

One plan. Your whole client roster.

Daniks.AI is an Amazon Ads autopilot we built for our own FBA brands before we sold it to anyone else. The Agency plan puts every client account under **one subscription, one invoice, and a portal that carries your brand** — not ours. You set a target ACoS per client; the AI agent runs campaigns, bids, keywords and negatives around the clock.

\$50M+ Ad spend under management	1,000+ Seller accounts automated	Verified Amazon Ads Partner Directory listing	23 Marketplaces / countries served
--	--	---	--

What you get on day one

- ✓ **White-labelled client portal.** Your logo, your domain, your colours — including favicon, link previews and transactional emails. Clients never see Daniks.
- ✓ **Unlimited seller accounts.** One agency subscription, no per-seat fees, no upgrade calls as the roster grows.
- ✓ **The AI agent on every account.** The same automation our largest brand customers use: campaign builds, keyword harvesting, bid control against your ACoS targets, automatic pruning of losers.
- ✓ **Agency-level defaults, per-client overrides.** Set your playbook once; deviate only where a client needs it.
- ✓ **Consolidated billing.** One invoice, one renewal date, one team to call. Cancel anytime.

The economics

Monthly client ad sales	Your cost	Rate
Up to \$200,000	\$999	≤ 0.50%
\$300,000	\$1,499	0.50%
\$500,000	\$2,499	0.50%
\$1,000,000	\$4,999	0.50%

\$999/month covers up to \$200,000 of ad-attributed client sales combined (USD; we handle FX). Every dollar above is billed at a flat 0.5% on the next invoice — no contract change, no renegotiation.

Versus stacking single-seller plans: break-even sits at roughly four active clients. Five clients at ~\$40K each costs \$1,495 in per-seller plans and \$999 here — you keep \$496/month. Ten clients at ~\$20K each: you keep \$291/month, and the per-seat tiers never shipped the white-label portal.

STEP 1

Kick-off call · 30 min

We collect your brand assets — logo, favicon, support address, primary colour, subdomain — provision the portal and walk your team through the agency dashboard.

STEP 2

Connect the accounts

Standard Amazon Ads API authorisation, roughly ten minutes per account, revocable by the client at any time. Seller Central operations stay untouched.

STEP 3

Hand over a branded URL

Your clients log in at your domain and read your reports. You run every account, campaign and ACoS target from one place.

HOW WE PROVE IT BEFORE YOU COMMIT

Start with an A/B test, not a migration. We leave existing campaigns running and launch ours in parallel on one or two accounts — first two weeks free. You compare ACoS and sales side by side on the same catalogue before anything else moves.

Recent result: a publishing client's account went from **46% ACoS to 21%** while sales roughly **doubled** in the first weeks. **Built by sellers:** we own and run Daniks, a top-selling German cookware brand — the autopilot answered to our own P&L first.
